The Detailed Forensic Report (DFR) is a court-admissible analysis of a shooting incident captured by the ShotSpotter system that is produced by forensic engineers. It provides critical details of when and where the shooting incident occurred.

Expert Witness testimony of the DFR bolsters the presentation of a case and assists in the trial. A ShotSpotter forensic expert presents the ShotSpotter evidence to the jury and this combination has been successfully admitted in over 180 court cases in 19 states and in the District of Columbia.
